Acknowledgments

More than anything else over the past five years, I have been affected by the positive contributions of so many great people in my life. This section is written by the generosity of the many family, friends and colleagues who have made the last five years an incredibly enjoyable and satisfying learning experience for me, both academically and personally.

Dwight Nishimura is a phenomenal teacher, with a remarkable ability to motivate students with a hands-off approach while caring a great deal about our whole life experience. I thank Dwight first for supervising this work, but equally for his patience, teaching, encouragement and sense of humour, and for being such a fine role model.

Steve Conolly has provided continuous encouragement and direction over the last five years. I thank Steve for being so generous with his time, for always being interested in my work, for convincing me that things would work out in the end, but mostly for also being a great role model.

John Pauly has had a direct role in all of my projects, and has provided a constant stream of ideas for me. His office is always open, and I am thankful for John’s willingness and patience to explain concepts to me over and over again.

Garry Gold has given a lot of time that has kept me closer to the clinical side of MR. I am grateful for all of Garry’s views on musculoskeletal imaging that have helped to make this work that much more satisfying.
I also thank Scott Delp for enthusiastically agreeing to chair my orals committee, and for his encouragement.

The Magnetic Resonance Systems Research Lab (MRSRL) is a work environment that will be difficult to equal. The genuine caring, high standard and modesty that are so typical of people in this group begin with Prof. Al Macovski. It has been a great privilege to work with and know Al, who is one of the most successful yet most modest people I have ever met. I thank Bob Hu for all the discussions that challenged me to think globally or differently. Craig Meyer has answered numerous technical questions and given much advice on many issues that I appreciate very much, as well as coaching the MRI softball team from worst-to-first in a single season. Greig Scott and Blaine Chronik have been faithful Canadians in the group, both also generously sharing a thorough knowledge of the field of MR. Finally, I am grateful to Shuye Huan for all her administrative assistance and for all the good food!

Krishna Nayak and I joined this group within a week of each other. From making the lab a fun place to the many useful discussions we’ve had, I have appreciated the chance to have Krish as a colleague and friend. In my “generation” I also thank Shreyas Vasanawala and Chi-Ming Tsai, for sharing many thoughts on different problems.

Bob Schaffer has been a fantastic friend over the years, and has kept my sports calendar full. Julie Sabataitis has always put up with the often-odd humour of the lab with a smile, and reminds us that Cleveland is indeed a great place. Karla Miller has enhanced the early-morning conversation, and Bill Overall keeps me busy thinking about neat MR ideas as well as how to beat Duke’s basketball team.

The older generation of students set a fine example for us. I especially thank Wally Block for teaching us EPIC programming and for daily jokes and stories, and Gerry Luk-Pat and Sanjay Mani for freely giving so much time to my simple questions but also for being interested in hockey. Adam Kerr did a lot to keep the lab running smoothly, and Jean Brittain gave a lot of advice on a full range of questions. I also thank Hatsumi Nielsen for always being positive, Dan Thedens for
his witty commentary about just about anything and Todd Sachs, who is always up for a good conversation.

I also thank the “younger” students for their enthusiasm and for keeping us thinking—Neal Bangerter, Juan Santos, Jong Park, Jin Lee, Nate Matter, Sharon Ulandersma and Ross Venook.

The involvement with clinical collaborators has added a tremendous amount of satisfaction to this work. I appreciate very much Philipp Lang’s encouragement, Gabrielle Bergman’s tireless explanations of cartilage structure and Chris Beaulieu’s support. Thanks also go to Jan Vandevenne and Jason Tsai. On the cardiac imaging side, it has also been a pleasure to work with Shuichiro Kaji and Phillip Yang.

From General Electric, Ann Shimakawa has been extremely helpful again and again. I also thank Cynthia Maier and Anila Lingamneni for work towards clinical knee trials.

Aside from many colleagues, there are so many friends who have made this a great place to live, beginning with the residence crowd, especially Chris Griffith. I am grateful to many groups for adding a sense of balance including “Tuesday Hoops,” Longshots football, Sunday volleyball, Jedi-Mind-Tricks hockey, FC BrewHaHa soccer and the ski patrols at Lake Alpine and Sugar Bowl. Finally, to the many friends back in Canada who have given so much encouragement, I thank you all so much for the constant reminder of where home is.

My closest friends have constantly reminded me what is important. Rosy Lee has never minded being woken up to give an hour-long pep talk. Julie and Duncan provide great “life” discussions. Annette and Dave have been on the east coast for too long, but so often it feels like they have been right here with me. Clement Wong has shared the excitement of being at Stanford, by being a regular visitor. Eileen and Andreas have provided many a great meal or games night, and Andreas’ advice over 12 years has, amongst various life and engineering philosophy, really taught me to be myself. Toni and Tim have shared countless trips with me and shown me a
fine example of what’s important, both in life and in an average day. Their generous friendship is a constant.

My family have given me the opportunities and principles that I live for. Gemes, Granny and Grandad, Rosemary, Rob and Jen and Lora have all been a great source of encouragement in their own way.

My brother Dave has constantly shown the way for me, always giving a useful and honest perspective. Mum and Dad have given so much to provide us with an education beyond compare, and have encouraged us to make the most of every opportunity. Mum, Dad and Dave have given me the ticket for this journey, and to them I dedicate this thesis.
